

# Polar Manifesto

## Resume :

Polar is a GameFi project launched on January 11th. In the last few months, we have been overwhelmed by the project reception and the community that has formed around it.

As a team we're thankful for the community's continued support and trust.

In this Manifesto, we would like to lay down our vision for the Protocol and how we can grow the ecosystem together with innovative products and services.

Our primary goal is to form a network of like minded and trusted DeFi and GameFi projects to expand \$Polar utility and accrue value to the current protocol.

To achieve this goal, we think it is important to build products and services that help further the integration between gaming and finance.

Hence we propose to form Polar Guardian, Polar Grants, Legend of Polaris and Polar Dano

## Our vision :

Defi is a constantly changing environment of innovation. It is an environment full of opportunities but unfortunately, an environment where investors lack the rugs and scams.

Today, there are an estimated \$83 billion worth of scams in the Defi space.

These repeated scams are a hindrance to innovation, a danger to the DEFI ecosystem and ultimately a danger to investors and creators.

It is with the vision of putting community first and protecting DeFi users.

### Polar Guardian.

*The information presented is subject to change as the project evolves.*

As a team we learned a lot since launching Polar Protocol. With continuous feedback from our community, we improved the Protocol and established GameFi standards that we would love to see applied across the industry.

Hence we're launching Polar Guardian, an audit and consultancy service for GameFi projects that build on Avalanche.

Members of the Team and the Polar Community will help secure GameFi protocols wishing to join our community. The Polar Guardian projects will work closely with projects to improve standards within the ecosystem and create synergy between protocols.

At this moment, Rewards will be negotiated on a case by case basis with the projects but eventually this will be automated by smart contract.

.

### Polar Grants & Ventures

*The information presented is subject to change as the project evolves.*

Polar Grants & Venture aim to incubate and accelerate innovative GameFi/DeFi protocols. The Team will elect and support projects that wish to integrate with our ecosystem. The Community can propose projects to the Grants & Venture Committee. In exchange for our support, the accepted projects will allocate to Polar Community Treasury a portion of their native tokens to diversify our holdings and accrue value to \$Polar governance token and the Protocol.

### Polar Consulting.

*The information presented is subject to change as the project evolves.*

Polar will offer a consulting service for all projects wishing to benefit from Polar's experience. This service will include "contacts with influencers, marketing strategy, community building strategy, strategic thinking etc.

## Legends of Polaris [P2E]

*The information presented is subject to change as the project evolves.*

Legend of the Polaris is an immersive crypto native MMO game set in an outer space universe. Legend of the Polaris is an independent project proposed by members of the Team & Community. At this early stage we are looking for different ways to integrate both ecosystems.

### *Legend of Polaris synopsis*

*The journey begins with Polaris, an ancient ice planet divided between clans and ravaged by war. Players choose their hero and start to explore lands, form guilds and defend territories.*

*Archer, Mage, Swordsman get your loot bag in order and complete quests, explore dungeons and defeat enemies*

## Polar Dano (polar nodes).

*The information presented is subject to change as the project evolves.*

As believers of decentralization we want to tend towards a fully autonomous DAO for Polar Nodes.

Polar Dano is an organization that will decide on new updates and exciting features within Polar Nodes. A Community Treasury will be established to fund those initiatives and for the use of \$Polar governance token holders.

We will lay down a path to progressive decentralization and integrate voting and multisig elections for the DAO.
